## **CONCENTRATE FOR HARD SURFACES WITH A DISINFECTANT EFFECT**

Product to be diluted for the disinfection of hard surfaces.

It is suitable for the disinfection in the food and beverage sector as well as other food-related areas, and in critical institutional facilities such as health care establishments, schools, offices, sports facilities and industrial areas.

Due to the incompatibility of quaternary ammonium salts with other detergents, please thoroughly remove the used detergent with water before disinfecting surfaces with ARES.

It is recommended to apply the disinfectant after a cleaning process.

### **INSTRUCTIONS FOR USE**

- For bactericidal activity, apply the product to visibly clean surfaces at the specified dilution (5%) and leave it on the surface for 5 minutes.
- For fungicidal activity, apply the product to visibly clean surfaces at the specified dilution (5%) and leave it on the surface for 15 minutes.
- The product can be applied in several ways: by washing surfaces with the product, by using a cloth, by spraying or fogging the diluted product onto surfaces or by immersing equipment and utensils in the diluted product.
- Disinfected surfaces that will come into contact with food must be rinsed with water before being used.
