BEER DET

CLEANING PRODUCT FOR BREWERY CIP SYSTEMS

Chlorinated detergent product designed for cleaning brewery fermentation tanks, coolers and plants.

This product allows to cleanse and purge fermentation tanks and containers.

The maintenance phases are fundamentals to both produce beer and to guarantee a high quality product. The excellence of the product can be guaranteed not only by the taste and the organoleptic salubrity, but also through the efficiency of the manufacturing machines.

It is a low foam formulation and does not contain phosphates for a minimum environmental impact.

INSTRUCTIONS FOR USE

- Dilute the product in water with a dosage between 4-6%.
- Use hot water, at least 60°C, and keep it in recirculation for at least 30 minutes.
- Rinse the treated tank/cooler/container with clear water.

PRECAUTIONS

Please consult the safety data sheet.
