### **SCENTED DETERGENT FOR FLOOR-WASHING MACHINES HIGH EVAPORATION**

Scented, non-foaming detergent with high evaporation for floors studied for use with floor-washing machines. It leaves no residue on mechanical parts, and does not produce cavitation. It performs a bactericidal action on tank residues.

It contains special sequestering agents, a calibrated mixture of anionic and non-ionic surfactants, anti-redepositing and penetrating agents.

It is safe on all surfaces, painted and unpainted, on tiles, marbles and linoleum. It is studied for use with washer-driers with which, in the right dosage, it does not make the pumps seize, does not allow odours to form if washing residue remains in the tank, does not have silicone residues that jeopardise the mechanical operation of the transfer pumps.

#### **INSTRUCTIONS**

Used with floor-washing machines: diluted with water at 1%.

It is diluted with cold or hot water (for dry and persistent grime, it is preferable to use it mixed with water at the temperature of 25-50°C).

The recommended temperatures refer to the consistency of the grime to be removed.

#### **PRECAUTIONS**

Consult the safety information sheet.
