

## PRECLEANER

### LOW-FOAM SOAKING DETERGENT TO USE BEFORE DISHWASHER

PRECLEANER is a liquid detergent formulated to leave pottery, flatware, glass, pans, kitchen appliances etc. to soak before putting them in the dishwasher, whenever you wish to significantly accelerate and improve their degree of cleanliness.

It can also be used with hard water, without losing its effectiveness. It generates very little foam, allowing for its use before putting items in a dishwashing machine, without creating any inconvenience during the washing cycle.

#### DIRECTIONS FOR USE

PRECLEANER can be employed in different ways, based on the amount of dirt and on the specific equipment and needs: by immersion, with a brush, etc.

The recommended percentage for use – that can be modified based on the actual conditions in which the product is employed – is 1.5 – 3% in water, preferably lukewarm or warm in order to accelerate its effectiveness to the max.

After soaking in PRECLEANER solution, items may need a quick rinsing to complete the removal of the emulsified dirt, thus reducing the accumulation of dirt in the dishwashing machine.

Dosage based on water hardness in °F

sweet (0-15)	18 – 25 ml/l
medium (15-25)	25 – 28 ml/l
hard (over 25)	28 – 35 ml/l

#### PRECAUTIONS

Please refer to the material safety data sheet.  
FEARS FREEZING TEMPERATURES
